LISTEN TODAY

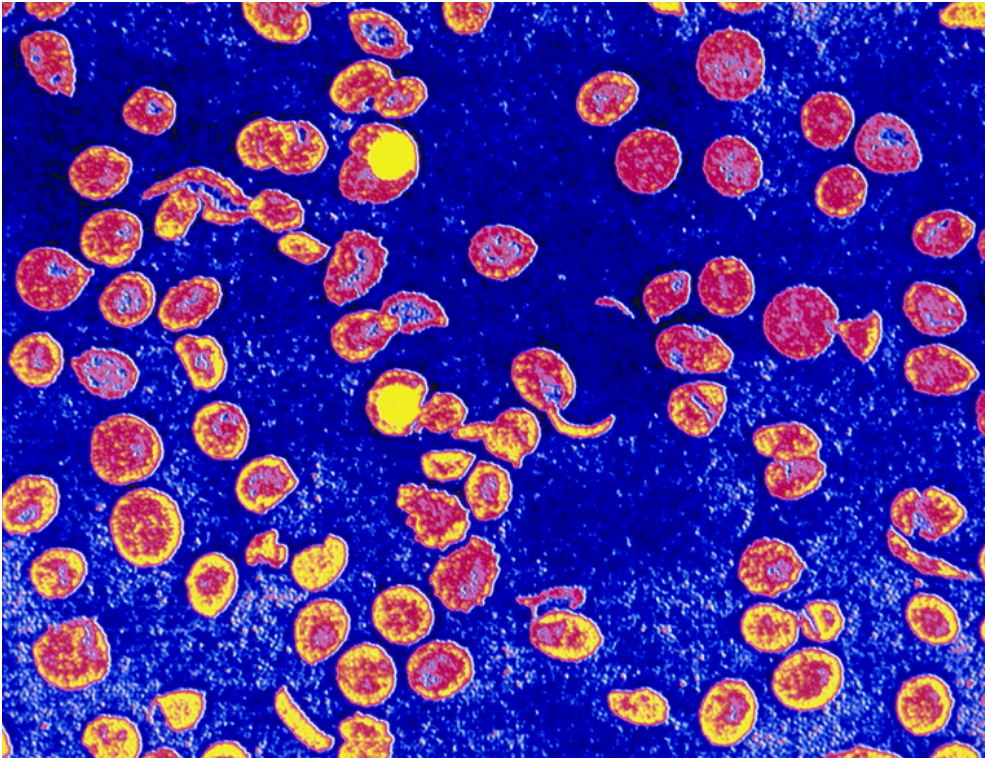

SCIENCE ROBOTICS | 22 JUL 2026

Fusing imitation and reinforcement learning for manipulation

KUN LEI, HUANYU LI, *ET AL.*

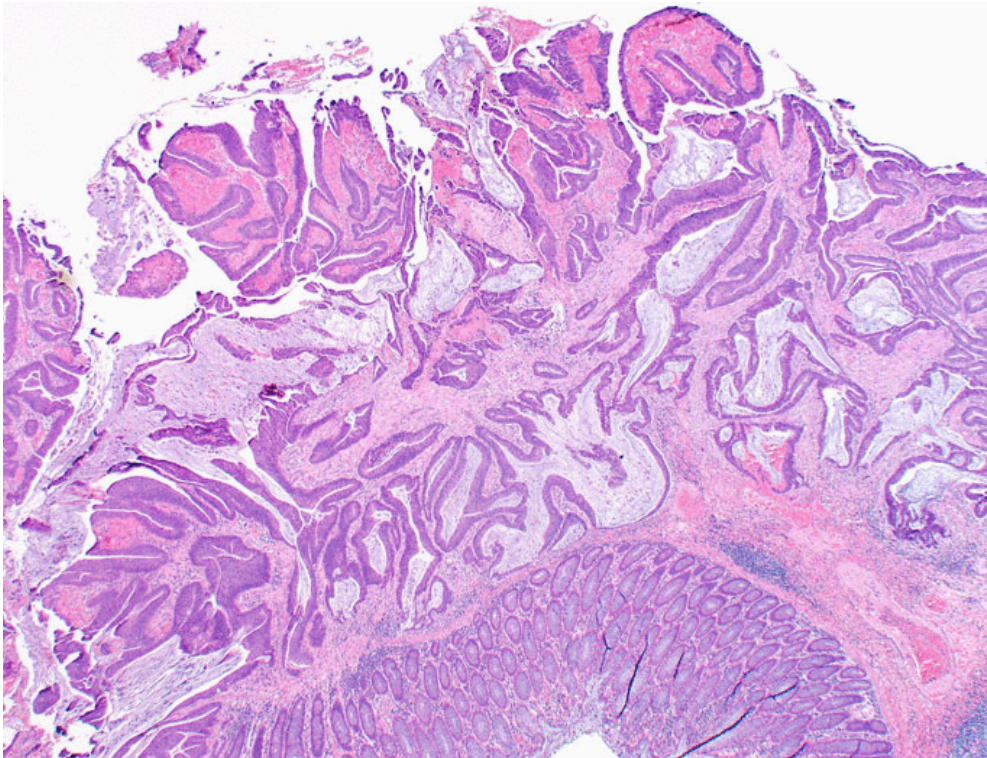

A reinforcement learning framework attained 100% success on eight robot manipulation tasks with human-comparable efficiency.

If the scientific community fails to address the influence of AI, then authentic research and validated findings will slow down to an expensive trickle into established knowledge, and the opportunities for flawed or fabricated information to be seen as reality will grow—all while AI profiteers cash in.
